## Przykłady

- Wybór jest tak duży, że trudno było się zdecydować więc...
- Prywatna historia o XSS i RCE

- Używanie powszechnie uznanych frameworków wedle zasady "Given a thousand eyes, all bugs are shallow." Linus
- Podniesienie higieny wytwarzania oprogramowania:
  - Secure by Design wbudowanie security w proces wytwarzania oprogramowania (via Secure SDLC / DevSecOps)
  - Testowanie pod kątem uznanych standardów / wytycznych (e.g. OWASP ASVS, OWASP Top 10, etc)

# Zewnętrzne komponenty

### Przykłady

- Neex i bug (OS command injection) w sposobie wywoływania narzędzia z pakietu GraphicsMagick — Imgur
- Chris Evans i bugi (memory disclosure) w ImageMagick podatne wersje zidentyfikowane na serwerach aplikacyjnych od <u>m.in</u>. Dropbox czy Yahoo!

- Świadomy wybór zewnętrznych komponentów
  - Mniejsza powierzchnia ataku = mniejsze ryzyko
- Zasada least-privilege na tyle na ile to możliwe (e.g. sandbox)

- <a href="https://scarybeastsecurity.blogspot.co.uk/2017/05/proving-missing-aslr-on-dropboxcom-and.html">https://scarybeastsecurity.blogspot.co.uk/2017/05/proving-missing-aslr-on-dropboxcom-and.html</a>
- <a href="https://scarybeastsecurity.blogspot.co.uk/2017/05/0day-proving-boxcom-fixed-aslr-via.html">https://scarybeastsecurity.blogspot.co.uk/2017/05/0day-proving-boxcom-fixed-aslr-via.html</a>

# Przykłady

- Deserializacja parametru cookie, oraz memory corruption w PHP-owej funkcji unserialize() — PornHub
- "The worst bug bounty ever" bardzo drogi romans Shopify z mruby
- "Exposing Hidden Exploitable Behaviors in Programming Languages Using Differential Fuzzing" — ciekawe i niebezpieczne zachowania interpreterów
- Własny vulnerability research popularnych interpreterów (for fun & no profit)

- Zasada least-privilege na tyle na ile to możliwe (e.g. sandbox)
- Banowanie problematycznych funkcjonalności

- <a href="https://www.evonide.com/how-we-broke-php-hacked-pornhub-and-earned-20000-dollar/">https://www.evonide.com/how-we-broke-php-hacked-pornhub-and-earned-20000-dollar/</a>

# Sprzęt

### Przykłady — CPU 1/2

- Bugi
  - Pentium FDIV bug Intel \$\$\$ =
  - CVE-2012-0217 (i młodszy brat CVE-2006-0744) Intel SYSRET znalezione w 2012 przez Rafała Wojtczuka (InvisibleThingsLab)
  - AMD microcode security update Robert Święcki podczas fuzzowania kernela na domowej stacji
  - Meltdown & Spectre Jann Horn (Project Zero) i inni

### Przykłady — CPU 2/2

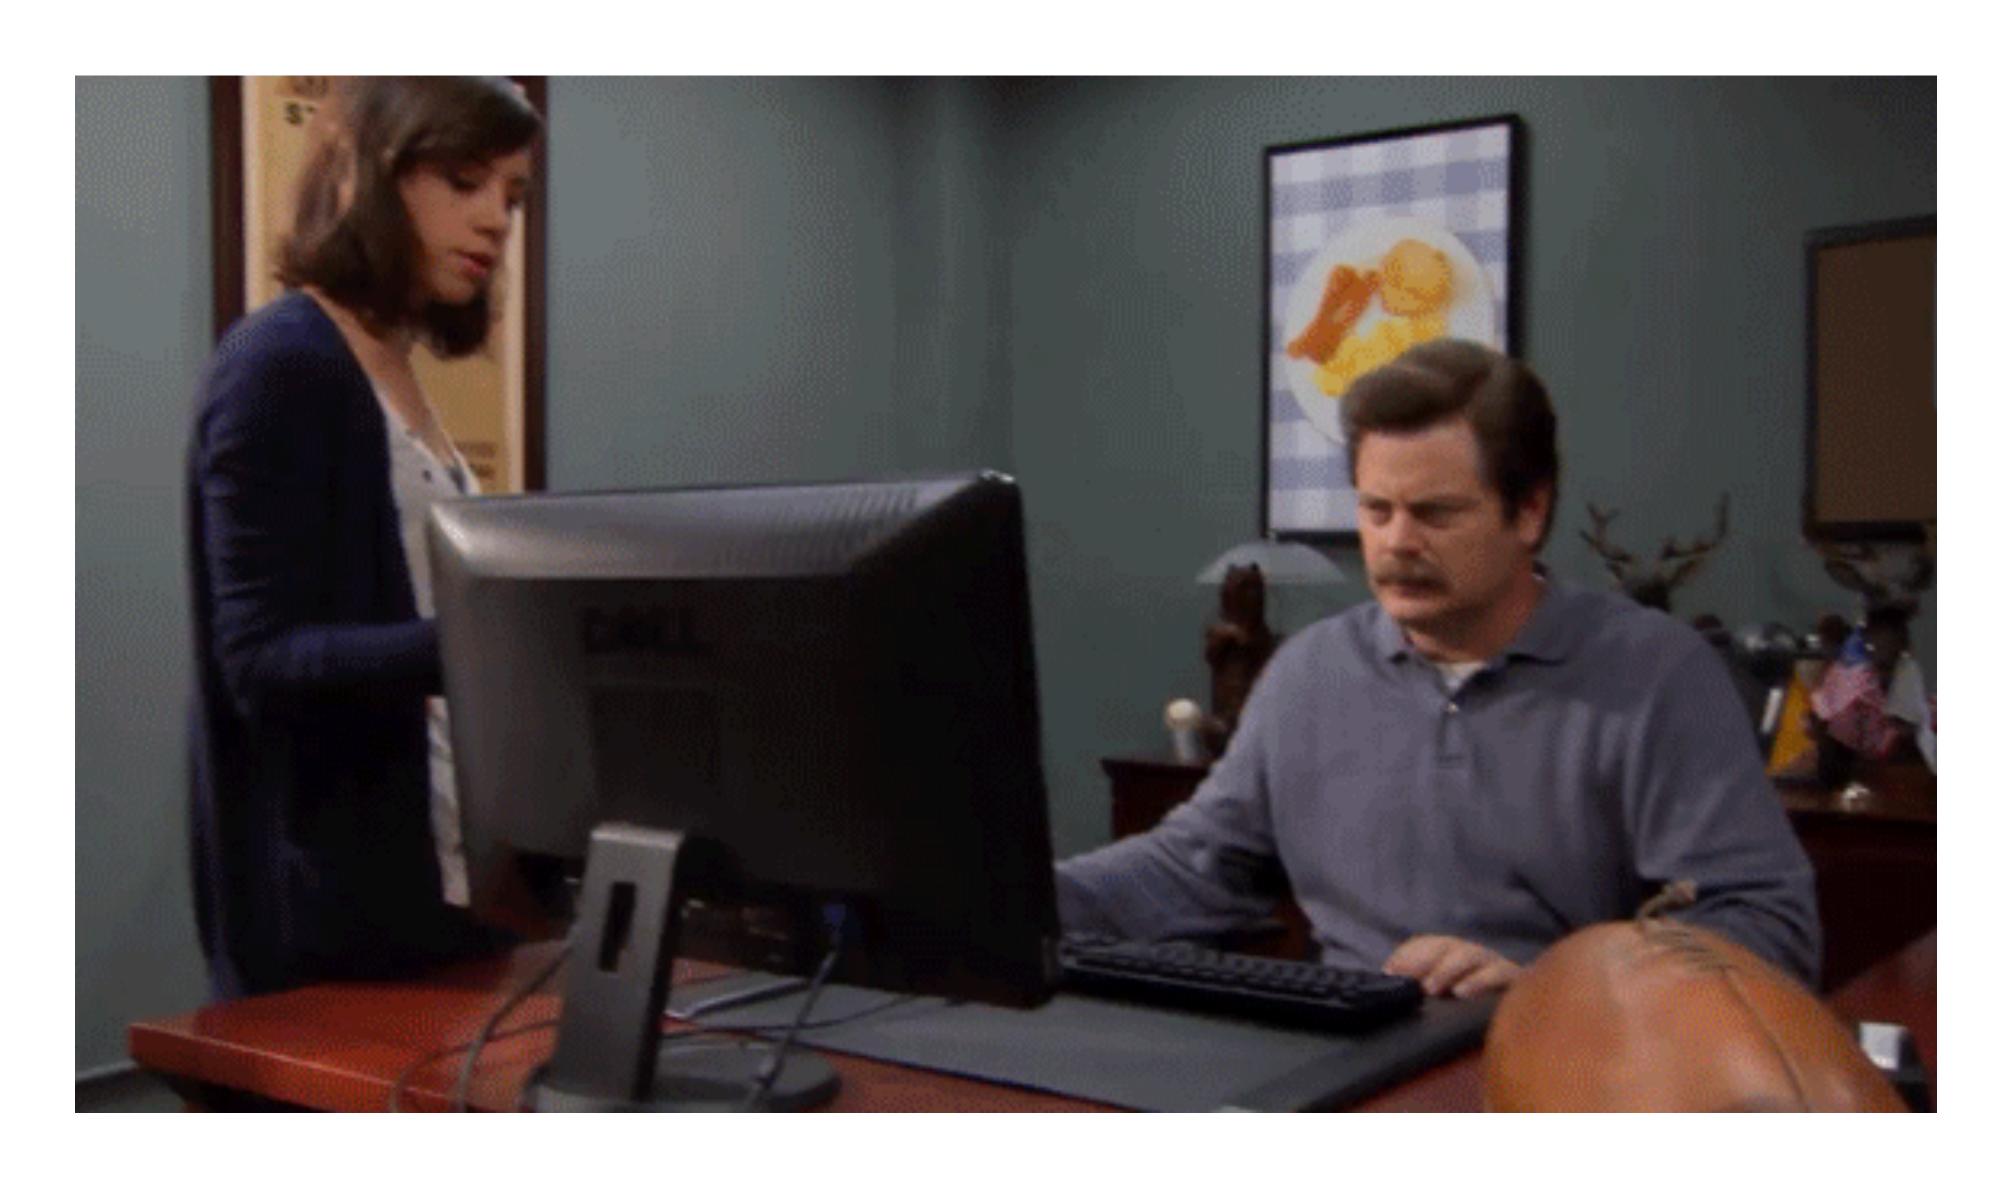

- Ficzery?
  - sandsifter Fuzzing CPU na BlackHat 2017 przez Christophera Domas
  - Intel-SA-00086 bugi w Intel Management Engine (ME)

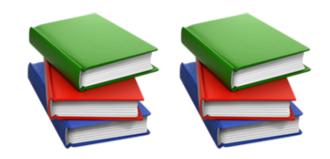

# Przykłady – RAM

- RowHammer oryginalny pomysł i research Thomas Dullien et al (Project Zero); dalsze działania prowadzone przez różne grupy akademickie
  - Na początku (2015) desktopy (lokalnie)
  - Później (2016) urządzenia mobilne (lokalnie) oraz VM-to-VM attacks ("lokalnie")
  - Teraz (2018) urządzenia mobilne (zdalnie!) serwery w chmurze (zdalnie!)

### Podsumowanie

- Software jest popsuty pod każdym kątem
- Hardware jest popsuty i to dopiero wierzchołek góry lodowej
- Dobre praktyki na każdym stopniu zmniejszają ryzyko, ale nigdy go nie wyeliminują
- Bezpieczeństwo to proces, nie produkt
